Submission Format

Submission will happen over moodle. You are expected to submit a single zip named **<entry_no>.zip** containing your code. Upon unzipping the submission file should **create a folder** with your entry number. The folder should include a `run_assignment1.py` file which will be ran as follows

```
python run_assignment1.py --input_path <path_to_input> --solution_path
<path_to_your_solution>
```

Your code should follow input and output formats as specified in the assignment documentation. To make sure your code generates output in correct format run format_checker.py file from the moodle as follows

```
python format_checker.py --solution_path <path_to_your_solution>
--ground_truth <path_to_gold_output_file>
```

Above program will check the format of your output file and compute metrics against gold outputs. Make sure the above program runs successfully on your output file before submission.

Please note that there will be a penalty imposed if the code does not properly follow the above format.
